Assignment #1

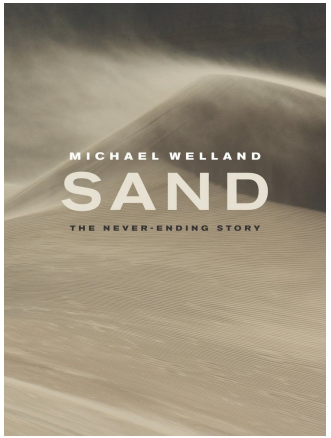

An entrepreneur has come up with an idea to make Silicon wafers in the vicinity of Thar desert. They have approached Union govt for 50% subsidies and State govt of Rajasthan for 20-30% subsidies under India Semiconductor Mission to setup a plant to make Silicon wafers out of sand. They claim that these wafers can be used by the semiconductor fabrication facilities coming up in the neighbouring state of Gujarat. They claim that this will help in creating a truly domestic supply chain and support the efforts to make India Atma Nirbhar and Viksit by 2047. Both govts have approached you to check the veracity of their claims and the feasibility of the proposal. Read the relevant chapter of these books and concise 1 page evaluation report (**pdf**) by 10th August (Sunday 11:59 PM)citing **only scientific and engineering reasons**.

Chapter- The Longest Journey

Chapter- High Tech, High Purity
